INSECT & FLY SCREENS

Standard Screen

A durable aluminium frame that is easily removable for cleaning.

A nylon brush around the outside creates the perfect seal against flying insects, ideal for commercial and domestic use.

With Sub-Frame

A sub-frame takes the screen away from the window, meaning the protruding handle does not make contact with or pierce the fly screen mesh.

The sub-frame comes in 50mm x 25mm.

Double Slider

Two independently moving screens slide along a sturdy aluminium out framework, offering easy access for the opening and cleaning of existing windows.

Can be fitted horizontally or vertically.

Chain Winder System

The ideal solution to awkward access windows.

Turning the handle opens the window without the inconvenience of removing the screen.

Vent-A-Lite

A retractable screen perfect for office or domestic use.

A braking device allows a smooth and gradual retraction of the screen.

Canopies

The proofing alternative when internal screening is not possible.

Screens are fitted to the outer face of the canopy, ideal for covering external vents, louvres and centre pivot windows.

Heavy Duty and Standard Fly Screen Doors

The industry's first choice for many years: A hard wearing door which covers the majority of applications.

The standard mesh is upgraded to stainless steel, whilst a protective grille prevents the mesh from being pushed out, making it a must for high traffic flow areas.

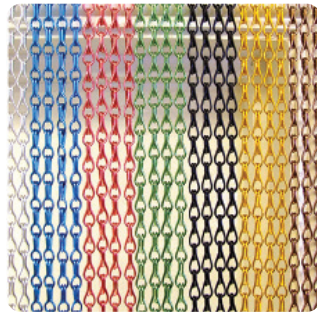

Our standard door is ideal for use on domestic or small industrial premises that do not receive frequent or heavy use.

Fitted with standard fibreglass mesh and without a protective grille, every standard duty door comes complete with its own self closer.

Chain Link Curtain

A great value alternative for domestic and commercial premises.

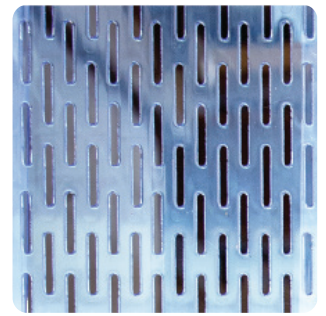

Colours available include silver, blue, red, green, black, bronze and gold.

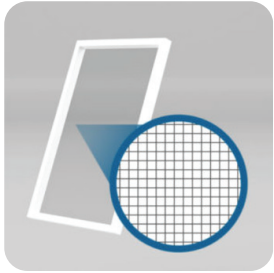

Perforated Curtain

A unique product suitable for use where proofing is essential yet ventilation is a must.

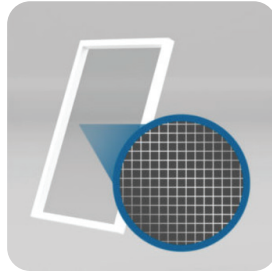

Maximise airflow and pest preventions whilst retaining high levels of light transmission and visibility.

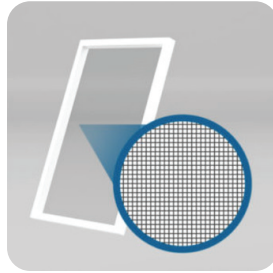

Mesh Types

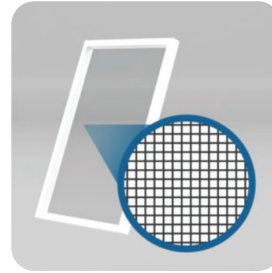

Standard Fibreglass

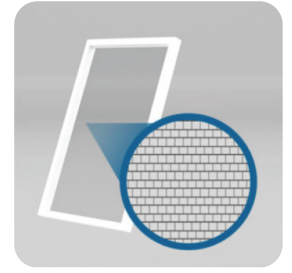

Stainless Steel

Midge Mesh

Pet Mesh

Anti-Thrip

Our wide range of meshes can provide the answer for all scenarios, proofing against pests such as whitefly, midges and thrip, all offering differing levels of durability.

Standard Fibreglass

The standard choice for fly screen windows that are being fitted internally. When in situ the mesh is barely visible, allowing close to 100% light to enter the room.

Stainless Steel

A vital component of our heavy duty fly screen doors, standing up to the wear and tear of a factory/busy restaurant environment. Also recommended for any external fly screen windows where it is exposed to the elements.

Midge Mesh

A smaller hole gauge that is necessary for areas with smaller flying insects.

Pet Mesh

Recommended for any domestic properties with cats and dogs. An extra protective coating on its surface protects the mesh against the claws of domestic animals.

Anti-Thrip

An agricultural mesh that is white in colour, with a far smaller hole gauge for areas with small flying insects.
